Mission and Goals
Our mission is to train professionals who are prepared to conduct scientific research exploring the physiological, molecular, and behavioral aspects of nutrition and metabolic health. Through interdisciplinary education and research, our program prepares students to advance scientific discovery and disseminate the latest findings to the public by way of professional publications, classroom education and community outreach.

The broad program goals are the following:
1. Train research scientists and academic scholars on the fundamentals of translational bioscience, enabling them to take research findings from bench-to-bedside.
2. Prepare graduates of all tracks and concentrations with the skills necessary to assume leadership roles in the professional community.

NUIP PhD Prerequisite course requirements
Students that are admitted lacking one of more prerequisites must complete them before matriculation or take the course here at the University of Utah in the first semester of study. Please note that undergraduate courses do not count toward graduate credit hour requirements.

| Chemistry| CHEM 3515 | 3       | Biological Chemistry Laboratory |
| Chemistry| CHEM 3520 | 3       | Biological Chemistry II     |
| Writing  | WRTG 2010 | 4       | Intermediate Writing: Research and Inquiry |

Ph.D. Expected Learning Outcomes
Program graduates will demonstrate a mastery of key concepts in the following areas: research design, statistical analysis, scientific writing, macronutrient metabolism, and general metabolic physiology. Students that complete the advanced Integrated Physiology emphasis will have expertise in muscle, cardiac and pulmonary physiology, while students that complete the Nutrition emphasis will have expertise in key areas of metabolic regulation, micronutrient metabolism, and nutrition biochemistry.
Program graduates will be able to do the following:

- demonstrate a mastery of key concepts in physiology, nutrition, and metabolism as they relate to health and disease conditions.
- be able to integrate scientific information gained through literature and laboratory discovery into their own research applications.
- demonstrate effective communication of nutrition information using written reports, professional presentations, multimedia approaches, and technical research formats.
- understand professional, academic, and scientific ethics.
- demonstrate an ability to self educate through literature review and analysis.
- possess good general research skills including hypothesis testing and experimental design, and learn technical laboratory skills relevant to modern biomedical research.

Program Costs and Financial Assistance

Students in the Ph.D. program are responsible for tuition based on the schedule published by the graduate school at the University of Utah on the following website: http://fbs.admin.utah.edu/income/tuition/college-of-health.

The Department of Nutrition and Integrative Physiology offers financial assistance to some students through the award of Teaching (TA) and Research (RA) Assistantships. These positions provide financial assistance to graduate students in exchange for teaching/research and/or service related work for the department. A full assistantship provides a tuition waiver and a stipend paid throughout the academic year; these are usually reserved for doctoral students. Master’s students can be eligible for a half-time assistantship that comes with a 50% tuition waiver and lower stipend with a work load commiserate with the Master’s program training. The department retains the right to disseminate assistantships based upon the number of applicants and department need. Once the thesis is defended, students are no longer eligible to receive these financial awards. Financial support awarded prior to the thesis defense will be honored until the completion of the contract. A master’s degree candidate can receive financial support (TA/RA) for a maximum of two years. Students that have TA’s or RA’s are required to satisfactorily fulfill their responsibilities as determined by their supervisor, mentor, or department chair.

Students must maintain a 3.0 GPA to be eligible to receive the tuition waiver. Students whose GPA falls below 3.0 will have the tuition waiver reversed at the end of the semester, and will be responsible for payment of the tuition and applicable late fees. Other financial aid is available on a limited basis from the University and outside organizations. All students are encouraged to apply for outside funding to support graduate studies. For additional information, please consult the following link on the University of Utah Graduate School website. http://gradschool.utah.edu/tbp/graduate-fellowship-opportunities/

Academic Calendar, Vacations and Holidays

Students with Teaching and Research Assistantships must check with course instructors and research advisors before planning vacation time. Assistance with grading and laboratory procedures may be required during final exam week and possibly other holiday periods. Any vacation time off outside University holiday dates should be approved first with the mentor / chair of supervisory committee. Please refer to the full academic calendar detailing official University holidays at: http://registrar.utah.edu/academic-calendars/.
Programs of Graduate study in the Department of Nutrition and Integrative Physiology

Students in Ph.D. program will select an emphasis in either Nutrition or Integrative Physiology. The chairperson serves as the student’s advisor. The student’s thesis committee approves and guides the program of study with regards to elective coursework and the completion of a quality thesis/dissertation. In general, students are encouraged to tailor the curriculum to complement their research interests and goals.

Ph.D. Program tracks of emphasis
In additional to the core Ph.D. program coursework, students can elect to follow either the Integrative Physiology track or the Nutrition track that contain distinct course requirements. The Ph.D. is a research-based program where students are expected to complete a Ph.D. dissertation that is published and contributes to the body of knowledge in their field of study. The Ph.D. Program is designed for completion in 3-5 years. Department policy states there is a 7-year time limit on completing the Ph.D. program. In the event of family or personal illness, hardship, or other emergencies, exceptions to this time limit may be granted, but must be approved by the student’s supervisory committee, NUIP Director of Graduate Studies, and Dean of the Graduate school. The student must complete a minimum of 72 credit hours to earn the degree.

Student Learning Assessment and GPA policy
Student learning is assessed through instructor feedback on assignments, course grades and satisfactory progress on thesis/dissertation research. Students must maintain a grade of B- or better in all major graduate coursework and at least a C- in non-major courses. In order to graduate from the Department of Nutrition and Integrative Physiology at the University of Utah, a GPA of 3.0 must be maintained as detailed by the graduate school. These GPA criteria relate to coursework; thesis research credits do not factor into these GPA criteria. Students not achieving at least B- in major department courses or a C- in non-major outside the department courses must repeat these courses and achieve the minimum B- or C- in order to complete requirements for their graduate degree. Students are allowed to repeat a course only 1 time. The only exception to this rule is if a student has a documented medical event or personal hardship that necessitates a withdrawing from the course or a leave of absence from the term. An incomplete (I) may or may not be assigned depending on the exact circumstances, and the student will be allowed to take the course a 3rd time. Students who receive a C+ in a major course have the option of either retaking the course at the next opportunity or scheduling an oral examination over the entire course content with a panel consisting of the course instructor and selected tenure track faculty members. Each panel member will ask questions with the course instructor asking the majority. The examining committee will evaluate the student’s responses after the session and the committee will determine whether the student has achieved sufficient competency in the course subject matter. If the examining panel finds that the student has a better grasp of the subject matter than that reflected by their course grade AND it is at the academic level of B- or better, the student’s requirement to repeat the course will be lifted and they can proceed to graduate provided they meet all the other requirements of the program. The grade originally earned in the course will stand and cannot be changed; only the requirement to repeat the course will be waived. Students receiving a C or worse do not have the option of taking an oral examination and must repeat the course.

Teaching Assistant (TA) Requirement for all PhD students
Beginning with the entry class of 2019, all PhD students will be required to spend one semester as a TA in order to engage in direct teaching contact with graduate or undergraduate students. PhD students who began their program prior to 2019 will have the option of engaging in a TA semester if they desire. Mentoring for the PhD TA will come from the lead instructor for the course the TA will support, and / or the students PhD mentor. Duties will be determined based on consultation with the Director of Graduate Studies. The student’s own interests, advice from student’s mentor, and Department needs. TA responsibilities will be approximately 7-10 hours per week for one semester.
PhD students are eligible to enroll in their TA semester after they have completed their 2nd year of study and had their PhD research proposal approved by their committee.

**Possible TA duties include the following:**
- Independently teach a section of an undergraduate course under the mentorship of the lead instructor for that course (for example, NUIP 1020 or NUIP 4440)
- Assist a faculty member in teaching an undergraduate or graduate course, the TA will have some lecture responsibilities
- Independently run discussion or study sections in support of department undergraduate or graduate courses in coordination with the course lead instructor
- Mentor an undergraduate, new graduate student, or new post doctoral fellow in the laboratory for a semester.

**At the end of the TA semester, students will prepare a short summary report that addresses the following points:**
- Describe your TA’s duties
- Identify seminars or teaching training attended during the semester
- Provide examples of learning experiences you had while teaching / mentoring
- Did the TA experience change your perception of teaching / mentoring?

**Suggested Timeline and Benchmarks for PhD program of Study**

Students should follow the suggested timeline to ensure that they meet all graduate school requirements and can graduate in a reasonable amount of time.

**Year 1:**
- Course work as outlined in NUIP Graduate Handbook and electives selected in coordination with mentor and / or supervisory committee.
- Put together supervisory committee on University graduate tracking system by the end of Year 1 (see guidelines on supervisory committee on page 12).

**Year 2, Fall Semester:**
- Continue course work as outlined in NUIP Graduate Handbook and electives selected in coordination with mentor and / or supervisory committee.
- Develop dissertation proposal in coordination with mentor and committee.

**Year 2, Spring Semester:**
- Continue course work as outlined in NUIP Graduate Handbook and electives selected in coordination with mentor and / or supervisory committee.
- Develop dissertation proposal in coordination with mentor and committee.
- Take Comprehensive Exams (see page 12 for details).

**Year 2, Summer Semester:**
- Present dissertation proposal to full supervisory committee.
- Submit dissertation proposal to NIH for funding.

**Year 3 -5:**
- Focus on Dissertation research.
- Teaching Assistant semester may be completed anytime after Year 2.
- Completion in Year 4 or 5 is dependent upon satisfactory progress on research project and submission of manuscripts for publication (See page 14 for details).
Ph.D. program of study with emphasis in Integrative Physiology

Please note that NUIP 6380 is offered every other Fall semester while NUIP 6440 is offered every Fall. Therefore in Fall semester students will take NUIP 6380 if it is offered, and NUIP 6440 the following fall. NUIP 6381 and 6384 are offered every other Spring semester. In first year spring semester students will take whichever of NUIP 6381 or 6384 that is offered, then the remaining course the following spring. Total minimum number of credit hours required is 72.

*Note that full time Research Assistantship requires registration for at least 9 credits per semester

Other courses: As approved by student’s committee
Registration information, requirements and policies

Continuous Registration
All students must maintain continuous registration
- Students must register for a minimum of 3 credit hours each fall and spring semester
- Registration during summer semester is required for all PhD students. Either NUIP 7970 or Independent study.
- Students who do not maintain continuous registration will be required to re-apply to the University

Transfer Credits
The University allows students to transfer a total of 6 graduate credits from another University. Transfer credits must meet the following
- A grade of “B” or higher must have been earned in the transferred course(s)
- Credits must have been earned at an accredited college or university, as determined by the University
- The transferred credits must have been earned in the equivalent of a 5000-level course or higher at the University of Utah
- The student’s supervisory committee must approve of all the transferred courses

Eligible Course Numbers
- All courses counted toward graduate degrees at the University must be at the 6000-level or higher
- Courses taken below the 6000-level may be taken and may be required if deficiencies must be met
- 5000-level courses may be applied toward the degree upon supervisory committee approval
- Courses below the 5000-level may not be applied toward graduation
- Courses below the 5000-level will not be paid by the tuition benefit program

Credits for Thesis and Dissertation Research
PhD Students
- Must register for a minimum of 36 credit hours of NUIP 7970 Dissertation Research
- There is no maximum number of NUIP 7970 that may be applied toward graduation
- When NUIP 7970 is taken alone, without any other courses, the tuition for these courses is charged at the in-state rate

Residency Requirement
- All doctoral students must have two, back-to-back semesters of 9 credit hours of registration to demonstrate residency in Utah
- Any graduate student who has completed 40 credit hours at the University should apply for residency in the State of Utah (most applicable to doctoral students)
- Applications for residency must be submitted to the Graduate Admissions Office and supported by evidence of living in Utah, such as
  - Utah driver’s license, utility bills with Utah address, Utah car registration, Utah bank account, etc.

Time Limit
- The time limit for completing the Ph.D. is seven consecutive calendar years from the date of matriculation into the program. Note that Tuition benefit does not follow the same time limit as for completion of Ph.D. In general there are 10 semesters of Tuition benefit for Ph.D. students with a Bachelor’s degree, 6 semesters for students with an M.S. from the University of Utah, and 8 semesters for students with a M.S. degree from another university. Please see the following site and scroll down to “Restrictions” to view the details on Tuition Benefit program restrictions.
  https://gradschool.utah.edu/tbp/tuition-benefit-program-guidelines/
Graduation Registration and Forms
The semester prior to a student’s anticipated graduation, he or she must submit a Candidacy form. These are due at the beginning of November (spring graduation), March (summer), and June (fall). IRB approval or exemption or IACUC approval must be included with this form. All graduate students are required to complete the Graduate School forms that demonstrate progress through the academic program. These forms vary by degree so make sure the Ph.D. forms are obtained.

Please note the following information:
- Forms require signatures from the supervisory committee
- Forms sometimes require signature of the Director of Graduate Studies
- Forms must be submitted to the Graduate School on a specific timeline in order to ensure graduation by a certain date
- Students can contact the registrar for questions: registrar@utah.edu
- Information and forms regarding graduation can be found at: http://registrar.utah.edu/handbook/graduategraduation.php

Graduate Student Advisory Committee (SAC)
All graduate students are members of the graduate student advisory committee (SAC) and encouraged to participate. The SAC provides input and advice to the faculty on several levels. This committee:
- Evaluates faculty for tenure and/or promotion consideration
- Provides input for the NUIP Spring Banquet (held at the end of spring semester)
- May assist with graduate student orientation (at the beginning of fall semester)
- Assists with social functions of the graduate program

Graduate Supervisory Committee and Program of Study
- All students should assemble their Supervisory Committee by the end of the first year. Please fill out the following form on the NUIP website turn it into the NUIP front office.
  https://health.utah.edu/nutrition-integrative-physiology/degrees/coordinated-masters/supervisory-committee-form.php
- The chair of a graduate student’s supervisory committee is considered that student’s advisor and mentor. Students accepted to the PhD degree programs should have a designated mentor at the time of admission. The supervisory committee chair should be a tenure track faculty member of NUIP that conducts research and/or has knowledge in the student’s area of interest. Doctoral students must have a total of 5 committee members. A majority (3 out of 5) of the committee members must be tenure-track and from NUIP (primary or adjunct faculty). Up to 2 members may be from outside of NUIP. External faculty not from NUIP and employed at a different university, may be eligible for committee service upon approval from the Graduate School Dean.
- During the first year of study, and prior to the formation of the student’s supervisory committee, the Director of Graduate Studies, and the student’s mentor shall work together to serve as the student’s temporary Supervisory Committee.
- After the Supervisory Committee is formed, and the Program of Study is agreed upon, students should complete the following Program of Study form (POS) and submit it to the NUIP front office.
  https://health.utah.edu/nutrition-integrative-physiology/docs/2018_program-of-study.pdf
Exams and Requirements for Ph.D. Program

PhD comprehensive exam guidelines

Description and scope:
The comprehensive exam is to be taken at the end or soon after completion of the second year of study. The exam is designed to evaluate a doctoral student’s knowledge in the broad areas of nutrition, physiology, metabolism, research design, and statistics. The exact scope of the exam is decided by the student’s committee members (a total of 5 including 2 non-NUIP faculty) and reflects the general area the student has pursued in their graduate studies. For example, PhD students with nutrition emphasis may have some questions provided by committee members that emphasize areas in nutrition in additional to general questions regarding physiology and metabolism. Students in the physiology track could expect more questions in general physiology or questions specific to their area of study. It is important that all students work closely with their committee members for guidance on preparation for the exams. The exam date will be decided in coordination between the student and the student’s committee. This date should be set some weeks in advance, (for example, 4 weeks) to allow the student a defined period of study and preparation.

Format:
The minimum guidelines for the exam are as follows

- Written portion consisting of minimum of 4 timed sessions, though it is up to the committee’s discretion to require 5 written exams. Each session will last for 4 hours. Each committee member will provide one question to be answered by the student for each of the sessions. One of the written exams will exclusively focus on research design and statistics.
- If the student passes the written portion, they can move to the oral session that is conducted by the student’s committee. The oral session will be scheduled within 2 weeks of passing the written portion. Typically the oral exam lasts 2-4 hours, but can vary depending on the dynamics of the session and is at the discretion of the committee.
- There are two objectives for the oral exam portion:
  1. To have the student deliver an oral presentation, assigned one week prior to the exam by the committee, that will probe deeper into areas that may have been unclear in the written session. Alternatively the committee may instead assign an oral presentation on a topic outside the student’s area of study. This will be in the format of a research presentation similar to a journal club or research seminar.
  2. Allow the committee to probe deeper into topic relevant to the student’s area of study and follow up on areas of interest brought about by the student’s oral presentation.
- If the student fails either the written or oral portion of the exam, they will have an opportunity to re-take the exam within 1 calendar year. It is at the committee’s discretion to decide whether the student needs to re-take the entire exam (all written sessions and orals) or portions of it. During this time the student will carry on with their dissertation research. It is the choice of the student when they wish to re-take the exam, and they should notify the committee 4 weeks prior to this date.
- Please note that the student cannot submit their PhD Proposal until they have passed the comprehensive exam.
- If the student does not pass the comprehensive exam the second time, they will be dismissed from the PhD program.

Guidelines for Doctoral Dissertation research proposal

- The student must have a committee in place before proposing a project
- The student must PASS their comprehensive exams before presenting their proposal to the full committee and a public audience.
- The project should largely be developed by the student and faculty mentor with input as required from the committee
- IRB or IACUC approval is required of all research projects
A written component based on the NIH SF424 instructions and application package is required. Students shall use the instructions pertaining to the NIH application for a Pre-doctoral fellowship (F-31). The written component shall consist of Specific Aims and a Research Strategy as detailed below:

1. **Specific Aims (1 page limit):** State concisely the goals of the proposed research and summarize the expected outcome(s), including the impact that the results of the proposed research will have on the research field(s) involved. List succinctly the specific objectives of the research proposed (e.g., to test a stated hypothesis, create a novel design, solve a specific problem, challenge an existing paradigm or clinical practice, address a critical barrier to progress in the field, or develop new technology).

2. **Research Strategy (6 page limit):**
   a. **Significance:** Explain the importance of the problem or critical barrier to progress that the proposed project addresses. Explain how the proposed project will improve scientific knowledge, technical capability, and/or clinical practice in one or more broad fields. Describe how the concepts, methods, technologies, treatments, services, or preventative interventions that drive this field will be changed if the proposed aims are achieved.
   
   b. **Approach:** Describe the overall strategy, methodology, and analyses to be used to accomplish the specific aims of the project. Include how the data will be collected, analyzed, and interpreted as well as any resource sharing plans as appropriate. Discuss potential problems, alternative strategies, and benchmarks for success anticipated to achieve the aims. If the project is in the early stages of development, describe any strategy to establish feasibility, and address the management of any high-risk aspects of the proposed work. Point out any procedures, situations, or materials that may be hazardous to personnel and the precautions to be exercised.
   
   i. If you have multiple Specific Aims, you may address Significance and Approach either for each Specific Aim individually or for all of the Specific Aims collectively.
   
   ii. If the student and supervisory committee wish to submit the thesis / dissertation proposal to NIH for funding consideration, please refer to the detailed instructions in this link to complete the mentoring plan, training facilities, and other aspects of the full fellowship proposal.
   

**Doctoral Dissertation Guidelines:** Following a successful defense of a doctoral research proposal, the student will complete a two or more article dissertation based on their dissertation research. The decision of scope of research should be made in consultation with the student’s Chair and Supervisory Committee. The dissertation articles should surround a singular research theme. Each article in the doctoral dissertation is written up as an empirical article in format that would be suitable for submission to an appropriate journal in the field of study. The journal format should be selected under advisement of the committee chair and thesis committee. In general each manuscript should contain an abstract, introduction, methodology, results, discussion, and references. Additional information, such as supplemental figures, methodological details, supplemental tables, or statistical details can be provided as support documents. Students should consult with the Thesis Editor to
make certain that the formatting of the final document complies with university regulations. See http://www.gradschool.utah.edu/thesis/index.php.

**Doctoral Dissertation Defense:** The final examination for doctoral candidates is the oral defense of their written dissertation. *Students must have approval from the supervisory committee prior to scheduling a defense date.* The dissertation oral defense is in seminar format consisting of a 45-50 minute presentation period followed by questions from the committee and audience. The dissertation defense must be advertised publicly. The supervisory committee grades the exam on a pass/fail basis. Following successful completion of the dissertation defense, the chair of the supervisory committee signs the Report of the Comprehensive Examination for the Degree of Doctor of Philosophy.

---

**Graduate School Policies**

**Attendance / Injury / Illness Policy**
The University expects regular attendance at all class sessions. Students are responsible for satisfying the entire range of academic objectives and requirements as defined by their instructors. The university and department calendar allows students a healthy number of vacation or holiday days during the course of the year. Absences are only permitted for illness, injury or in the event of a death within the student’s immediate family. If an illness or injury occurs for more than two consecutive days, the instructor / supervisor has the right to request a physician’s excuse. Students that have a TA or RA position are required to be present for the full semester, including the grading period, or until all their responsibilities have been satisfactorily discharged as determined by their supervisor.

**Parental Leave policy**
The College of Health has a policy in place to govern requested leave by students for parental responsibilities. This policy can be found at http://gradschool.utah.edu/directors-of-graduate-studies/resources/ on the graduate school website. Please scroll down to “College of Health Parental Leave Policy.”

**Academic Retention and Remediation Procedures**
Once admitted to the program on matriculated status, candidates for the Ph.D. degree must maintain a cumulative GPA of 3.0 for all graduate course work. Students with a GPA below 3.0 are no longer eligible for tuition waiver benefits. In the event that a student drops below the required GPA, the Program Director will inform the student in writing that he or she has been placed on academic probation and is expected to meet GPA requirements within the next academic semester or 9 graduate credit hours. Copies of this letter will be placed in the students’ academic file and sent to the Department Chairperson and the student’s major advisor. In the event the GPA problem is not rectified within the next academic semester or 9 graduate credit hours, the case will be referred to the Director’s Committee. The Committee will review the case and recommend action. During the review process the student and major advisor will be allowed to present their case. The Department Chairperson will inform the student in writing of the final decision.

**General graduate school policies and regulations**
All graduate students should read carefully the regulations set forth in the Bulletin of the University of Utah (http://gradschool.utah.edu/graduate-catalog/). Students have the responsibility to understand and follow these regulations and to meet all required dates and deadlines.

**Equal Opportunity and Nondiscrimination**
The Department of Nutrition and Integrative Physiology follows the equal opportunity and nondiscrimination practices in the selection and management of students. This policy is outlined in the General Policy Statement contained in the Regulations Manual of the University of Utah 5-106.
The University of Utah is an "Equal Opportunity Employer," and is fully committed to the principle of nondiscrimination in all employment-related practices and decisions, including, but not limited to, recruitment, hiring, supervision, promotion, compensation, benefits, termination, and all other practices and decisions affecting university employment status, rights, and privileges.

University executive, administrative, academic, and supervisory officers exercising Employee management responsibilities are required to take vigorous and appropriate action to assure that all employment-related practices and decisions are made without discrimination, harassment, or prejudicial treatment because of race/ethnicity, color, religion, national origin, sex, sexual orientation, gender identity/expression, age, disability or protected veteran's status.

**Access and Confidentiality of Student Records**
Access to one's own official records and files is guaranteed to every student. Student's academic records are maintained in the Department of Nutrition and Integrative Physiology. The privacy and confidentiality of student records shall be presumed as outlined in policy 6-400 in the Regulations Manual of the University of Utah (see also the FERPA Regulations located at the end of this document).

**Withdrawal and Refund of Tuition and Fees**
Students are encouraged to discuss alternatives to withdrawal from the program with the Director of Graduate Studies or Department Chair prior to making a final decision. Matriculated students requiring withdrawal from the program must complete a Recommendation for Change of Graduate Classification form located at [http://registrar.utah.edu/handbook/graduateclassification.php](http://registrar.utah.edu/handbook/graduateclassification.php). This form along with a cover letter from the student must be presented to the Program Director and Department Chairperson for approval.

The completed approved form must be submitted to the Registrar’s Office no later than one week before the first day of the term the change is to be effective. If not submitted on time, the change will not be effective until the next semester. Refund of tuition and fees follow the University of Utah's Refund Policies located at [http://fbs.admin.utah.edu/income/ tuitioninfo/rp/](http://fbs.admin.utah.edu/income/tuitioninfo/rp/).

**Grievance / Complaints Procedure**
Students who feel they have been treated unfairly concerning any matter that involves the program, coursework, or research have the opportunity to appeal the matter. Students must first make attempts to settle the matter with the instructor of the course or mentor. If the grievance is not resolved, the following describes the channels in which the student should address the grievance.

**Procedure: Grievance Concerning Course Work**
If the grievance pertains to course work the student should first discuss the matter with the instructor. If the student is not satisfied with the decision of the instructor, the student should take the matter up with the Department Chairperson. The matter should be resolved at this point. Students who do not agree with the decision of the Department Chairperson can appeal to a Grievance Committee for a ruling.

**Procedure: Grievance Committee**
A Grievance Committee will be convened consisting of one student, the Director of Graduate Studies, two outside faculty members, and the Department Chairperson. No Grievance Committee member can be personally involved in the grievance procedure. The procedure for submitting a grievance to the Grievance Committee is as follows:
1. The student must submit in writing to the Grievance Committee a letter indicating the nature of the grievance and the disciplinary measures taken.
2. The letter will be circulated among the members of the Grievance Committee and a formal meeting will be held within two weeks of the grievance filing. The student should be present at the onset of the meeting to present the grievance verbally.
3. The Grievance Committee will meet privately to review the matter. A decision will be made at that time and the student will be informed in writing of the decision of the Committee.
4. Students who do not accept the decision of the Committee will have the opportunity to submit the grievance to the Dean of the College of Health in the presence of at least one member of the Grievance Committee. The Dean will hear the student's petition verbally. The Dean will notify the student in writing of the decision regarding the grievance.
5. If the grievance is not resolved upon recommendation of the Dean, the student has the prerogative to pursue further action through the Student Behavior Committee of the University of Utah. Procedures are outlined in the Regulations Manual of the University of Utah 6-400.

Disciplinary Action / Termination
Procedures outlined in the University of Utah Regulations Manual 6-400, Section IV govern the disciplinary action and terminations process so as to achieve the least adverse action upon the student. Procedures relating to disciplinary action against a student shall fall under the jurisdiction of the Grievance Committee. Termination from the program will be used sparingly and only for serious violations of misconduct.

Examples of misconduct include but are not limited to:
- Use of drugs or alcohol such that program work is hindered.
- Conviction of a felony.
- Unprofessional behavior toward any student, faculty, staff, patient, client, external collaborator, or family member.
- Theft.
- Falsifying research data.
- Plagiarism
- Cheating on course work and/or examination.
- Any other misconduct that the Committee feels warrants dismissal.

Students have the right to appeal the decision of the Committee. The student can present the case before the Dean and one Grievance Committee representative. Confidentiality will be maintained in handling all types of misconduct and sanctions concerning the student.

General Information

Safety and Wellness
Your safety is our top priority. In an emergency, dial 911 or seek a nearby emergency phone (throughout campus). Report any crimes or suspicious people to 801-585-COPS; this number will get you to a dispatch officer at the University of Utah Department of Public Safety (DPS; dps.utah.edu). If at any time, you would like to be escorted by a security officer to or from areas on campus, DPS will help — just give a call.

The University of Utah seeks to provide a safe and healthy experience for students, employees, and others who make use of campus facilities. In support of this goal, the University has established confidential resources and support services to assist students who may have been affected by harassment, abusive relationships, or sexual misconduct. A detailed listing of University Resources for campus safety can be found https://registrar.utah.edu/handbook/campussafety.php
Your well-being is key to your personal safety. If you are in crisis, call 801-587-3000; help is close. The university has additional excellent resources to promote emotional and physical wellness, including the Counseling Center (https://counselingcenter.utah.edu), the Wellness Center (https://wellness.utah.edu), and the Women’s Resource Center (https://womenscenter.utah.edu). Counselors and advocates in these centers can help guide you to other resources to address a range of issues, including substance abuse and addiction.

Health Insurance
Students are strongly encouraged to enroll themselves and their families in a health insurance plan. The group health insurance plan offered by the University includes accident coverage and enrollment information is received by mail. An enrollment card can be picked up at the Cashier’s Window, 165 Student Services Building.

E-Mail Account
All students are required to have an e-mail account established by the first week of school. To setup your required UMail account visit http://it.utah.edu/. Students may also contact the Campus Help Desk at (801) 581-4000, option #1 for assistance. The university email account (UMail) for each student is their uNID@utah.edu. This account and your mailboxes (directly inside the office door) will be the primary means of communicating with you during your graduate career. Communication by e-mail enhances access to faculty members and University policy and procedures. Important notices to graduate students will be sent via e-mail. Check e-mail messages and department mailboxes daily.

Informal Discussions
Graduate students are encouraged to consult frequently with all members of the graduate faculty in the Department of Nutrition and Integrative Physiology and with other graduate students with respect to course work, additional reading and research. By doing so, expertise may be developed beyond that provided solely by formal course studies. This expertise is helpful in the preparation for thesis / dissertation seminar may be of significant value in your future career.

General Department Facilities
The Nutrition Clinic is located in HPER West 108 and the Experimental Foods Laboratory is located in HPER North 227. Many faculty investigators also have their own laboratories located in the Eccles Institute of Human Genetics or the Veterans Administration Hospital on Foothill Drive. Students should consult the appropriate Laboratory Director about time, space, rules and regulations of the laboratory.

Family Educational Rights and Privacy Act (FERPA)

FERPA is a federal law that protects the privacy of student education records. Students have specific, protected rights regarding the release of such records and FERPA requires that institutions adhere strictly to these guidelines.

FERPA provides students the following rights regarding educational records:

- The right to access educational records kept by the school.
- The right to demand educational records be disclosed only with student consent.
- The right to amend educational records.
- The right to file complaints against the school for disclosing educational records in violation of FERPA.

Students have a right to know about the purpose, content and location of information kept as a part of their educational records. They also have a right to expect that information in their educational records will be kept confidential unless they give permission to the school to disclose such
information. Therefore, it is important to understand how educational records are defined under FERPA.

**Educational records are defined by FERPA as** records that directly relate to a student and that are maintained by an educational agency or institution or by a party acting for the agency or institution. Educational records are directly related to the student and are either maintained by the school or by a party or organization acting on behalf of the school. Such records may include:

- Written documents, including student advising folders
- Computer media
- Microfilm and microfiche
- Video, audio tapes or compact discs
- Film
- Photographs

Any record that contains personally identifiable information that is directly related to the student is an educational record under FERPA. This information can also include records kept by the school in the form of student files, student system databases kept in storage devices such as servers, or recordings or broadcasts which may include student projects.

**Records Not Considered As Educational Records**
The following items are not considered educational records under FERPA:

- Private notes of individual staff or faculty, *not* kept in student advising folders
- Campus police records
- Medical records
- Statistical data compilations that contain no mention of personally identifiable information about any specific student

Faculty notes, data compilation and administrative records kept *exclusively* by the maker of the records that are *not accessible or revealed to anyone else* are not considered educational records and therefore, fall outside of the FERPA disclosure guidelines. However, these records may be protected under other state or federal laws such as the doctor/patient privilege.

**Types of Educational Records**
The two types of educational records defined under FERPA have different disclosure protections. Therefore, it is important for faculty and staff to know the type of educational record that is being considered for disclosure.

**Directory Information**
Certain information in a student's educational record is defined as directory information under FERPA. Under a strict reading of FERPA, the school may disclose this type of information without written consent of the student. However, a student may exercise the option to restrict the release of directory information by submitting a formal request to the school to limit disclosure. Directory information may include:

- Name
- Address
- Phone number and email address
- Dates of attendance
- Degree(s) awarded
- Enrollment status
• Major field of study

Though it is not specifically required by FERPA, institutions should always disclose to the student that such information is considered by the school to be directory information and, as such, may be disclosed to a third party upon request. Institutions should err on the side of caution and request, in writing, that the student allow the school to disclose directory information to third parties.

Non-directory Information

Non-directory information is any educational record not considered directory information. Non-directory information must not be released to anyone, including parents of the student, without the prior written consent of the student. Further, faculty and staff may access non-directory information only if they have a legitimate academic need to do so. Non-directory information may include:

- Social security numbers
- Student identification number
- Race, ethnicity, and/or nationality
- Gender
- Transcripts and grade reports

Transcripts are non-directory information and therefore, are protected educational records under FERPA. Students have a right to privacy regarding transcripts held by the school where third parties seek transcript copies. Institutions should require that students first submit a written request to have transcripts sent to any third party as the privilege of privacy of this information is held by the student under FERPA. Schools should never fax transcripts because this process cannot guarantee a completely secure transmission of the student's grades to third parties.

Prior Written Consent

In general, a student’s prior written consent is always required before institutions can legitimately disclose non-directory information. Institutions may tailor a consent form to meet their unique academic needs. However, prior written consent must include the following elements:

- Specify the records to be disclosed
- State the purpose of the disclosure
- Identify the party or class of parties to whom the disclosure is to be made
- The date
- Signature of the student whose record is to be disclosed
- Signature of the custodian of the educational record

Prior written consent is not required when disclosure is made directly to the student or to other school officials within the same institution where there is a legitimate educational interest. A legitimate educational interest may include enrollment or transfer matters, financial aid issues, or information requested by regional accrediting organizations.

Institutions do not need prior written consent to disclose non-directory information where the health and safety of the student is at issue, when complying with a judicial order or subpoena, or where, as a result of a crime of violence, a disciplinary hearing was conducted by the school, a final decision was recorded, and the alleged victim seeks disclosure. In order for institutions to be able to disseminate non-directory information in these instances FERPA requires that institutions annually publish the policies and procedures that the institutions follow in order to meet FERPA guidelines.

FERPA has strict guidelines regarding disclosing the educational records of dependent students. Though FERPA allows such disclosure, the act mandates that the institution first publish clearly delineated policies and procedures for the disclosure of these records. The institution must publish
these guidelines annually in a format that is easily accessible to interested parties. Both the dependent student and parents sign written disclosure agreements stating, at minimum, the following:

- The dependent student understands and allows parental access to these educational records
- The dependent student and their parents have been given a copy of the institution's policies and procedures for the disclosure of students' records

Most institutions charge their registrar's office with the responsibility to determine how their institutions will comply with FERPA disclosure requirements. Registrars commonly work with legal counsel in fashioning and publishing these guidelines. Contact the registrar's office for additional information.

FERPA Summary
The Family Education and Privacy Act was enacted by Congress to protect the privacy of student educational records. This privacy right is a right vested in the student. Generally:

- Institutions must have written permission from the student in order to release any information from a student's educational record
- Institutions may disclose directory information in the student's educational record without the student's consent
- It is good policy for the institution to notify the student about such disclosure and to seek the written permission of the student to allow disclosure of any educational records including directory information
- Institutions should give the student ample opportunity to submit a written request that the school refrain from disclosing directory information about them
- Institutions must not disclose non-directory information about students without their written consent except in very limited circumstances
- Institutions should notify students about their rights under FERPA through annual publications
- When in doubt, it is always advisable to err on the side of caution and to not release student educational records without first fully notifying the student about the disclosure

Guidelines for all first year PhD students to discuss with mentors
The purpose of these guidelines are to encourage a discussion with your mentor regarding important issues that will come up during your time as a graduate student at the University of Utah. It is strongly encouraged that all students discuss these points with their mentors early in the first semester of study so that there are clear expectations of responsibilities.

1) Time Commitment
   What is the time commitment expected of the student as they are working on their dissertation project? Is this to be treated as a full time job?

2) Compensation
   What is the length and duration of the stipend offered?

3) Preferred Modes and Style of Communication
   How do the student and mentor prefer to communicate (e.g., email, phone, text), and with what frequency? What are the preferred forms of address, and what degree of formality in language is preferred? Who will the student be interacting with or reporting to on a day-to-day basis?
4) **Meetings**

What are the expectations of the student with respect to attendance at research meetings, colloquia, and other events? Are there specific lab or research group meetings to attend?

5) **Performance Evaluation and Outcome Assessment**

What is expected of the student in terms of specific work products or outcomes? How will the student’s development as a professional be evaluated? How will this evaluation be communicated to the student, and with what frequency?

6) **Mentor Conflict of Interest**

Is there a financial conflict of interest as determined by the University of Utah Conflict of Interest Office and Committee for any projects that the mentor assigns the student to work on? If so the mentor should disclose the conflict of interest to the student prior to start of the project. Visit research.utah.edu/integrity/.

7) **Certifications/Training**

Are any certifications required before the student can participate in the research? What is the plan for securing any required certifications? These might include training in lab safety, responsible conduct of research, human subjects protections, HIPAA certification, etc.

8) **Mentorship**

Will the mentor be readily available to guide and assist the student with writing proposal, grant applications, manuscripts, training opportunities, etc.?

9) **Rules and Procedures**

Where can the student learn about rules and procedures associated with the research? What should the student do in case of an emergency associated with the research? What is considered an emergency in the context of the research? What should the student do if they make a mistake?

10) **Authorship**

For publications (manuscripts and meeting abstracts) how will authorship for the work be determined? Are there any restrictions on the release of information that should guide the student’s communication about the research (e.g., in the case of patents or other sensitive information)?
