

A grayscale illustration of medical equipment is positioned on the left side of the slide. It includes an asthma inhaler at the top and a stethoscope below it, both rendered in a realistic style with shading.

Asthma Management

Introduction, Anatomy and Physiology

University of Utah
Center for Emergency Programs
and
The Utah Asthma Program

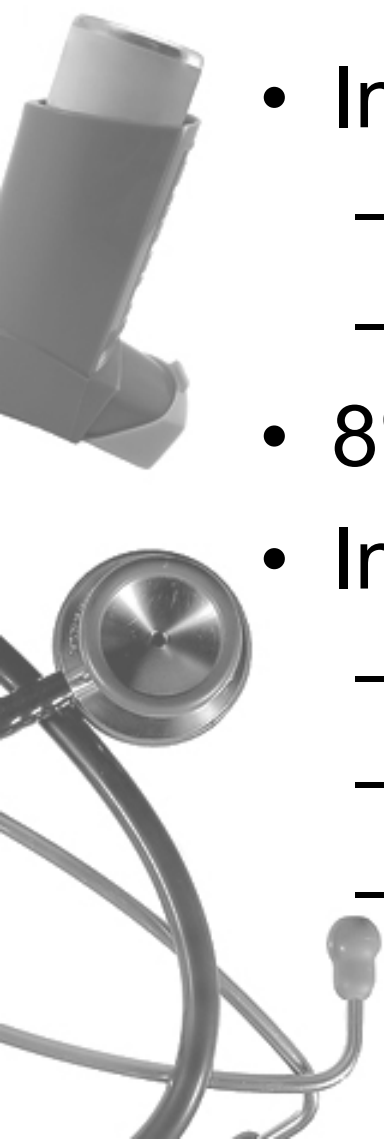

University of Utah Center for Emergency Programs

A grayscale illustration of medical equipment. In the upper left, there is a partial view of an asthma inhaler with its cap removed. In the lower left, a stethoscope is shown, with its chest piece and tubing visible. The background is a light gray gradient.

Incidence, Impact and Goals of Asthma Management

University of Utah Center for Emergency Programs

Prevalence, Morbidity & Mortality

- 
- A grayscale image of a medical device, likely an asthma inhaler, and a stethoscope. The inhaler is positioned in the upper left, and the stethoscope is in the lower left, with its tubing and chest piece visible.
- In 2003
 - 20 Million Americans Diagnosed
 - 72% men and 86% women
 - 8% of Utahn's have Asthma
 - In 2002...
 - 4,200 Deaths
 - 480,000 Hospital Discharges
 - 1.9 million Emergency Department Visits

Childhood Statistics

- In 2003, asthma was diagnosed in...
 - 6.2 million children under 18 years old
 - 1.2 million under 5 years old
- 3rd leading cause of hospitalization in kids
- 1st leading cause of school absences (for chronic conditions)

Human Impact of Asthma

- 
- 
- 1 in 5 adults are seen by MD regularly
 - 1 in 3 use medication for symptoms
 - 1 in 2 say asthma limits their activity
 - In 2003...
 - 24.5 million lost work days
 - \$11.5 billion in direct costs
 - \$4.6 billion in indirect costs

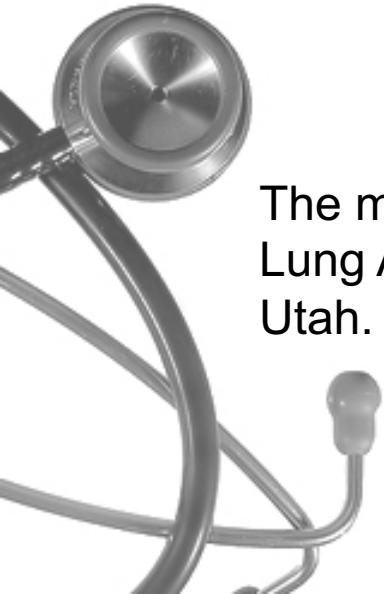

American Lung Association

The mission of the American Lung Association® is to prevent lung disease and promote lung health. The American Lung Association® is the oldest voluntary health organization in the United States, with a National Office and constituent and affiliate associations around the country. Founded in 1904 to fight tuberculosis, the American Lung Association® today fights lung disease in all its forms, with special emphasis on asthma, tobacco control and environmental health.

<http://www.lungusa.org>

The mission of the Utah Lung Association is similar to the American Lung Association® except it's efforts are directed to the people of Utah.

University of Utah Center for Emergency Programs

National Asthma Education and Prevention Program

National Goals in Asthma Management:

1. Assessment and Monitoring
2. Pharmacologic Therapy
3. Control Factors Contributing to Severity
4. Patient Education

Department of Health and Human Services • National Institutes of Health

National **Heart Lung and Blood** Institute

People Science Health

http://www.nhlbi.nih.gov/about/naepp/naep_pd.htm

University of Utah Center for Emergency Programs

Utah Department of Health Asthma Program

Utah Goals in Asthma Management:

1. Create an infrastructure from a public health perspective
2. Create an assessment & monitoring system
3. Build partnerships
4. Develop population-based strategies

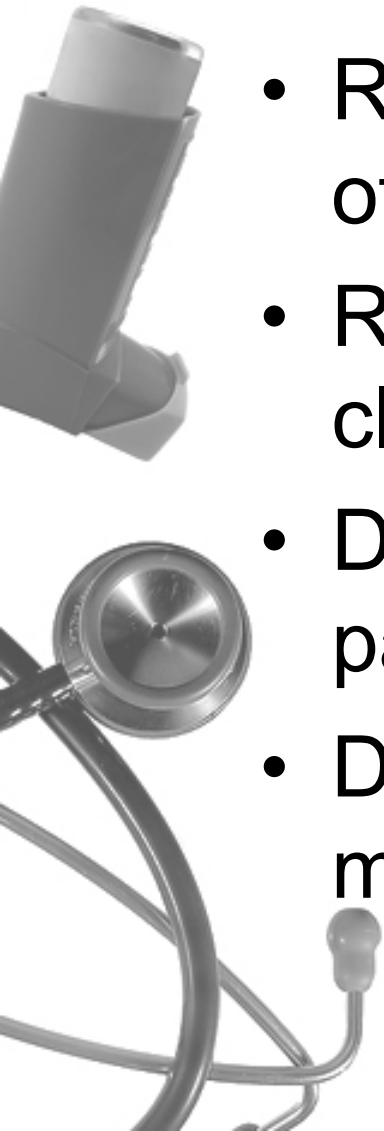

UTAH DEPARTMENT OF HEALTH

Asthma Program

<http://www.health.utah.gov/asthma/index.html>

University of Utah Center for Emergency Programs

Goals for this CME Activity

- 
- A grayscale illustration of medical equipment. On the left, there is a partial view of an asthma inhaler with a white cap and a grey body. Below it, a stethoscope is visible, showing the chest piece and the coiled tubing.
- Review basic anatomy and physiology of the respiratory system
 - Review the pathophysiology and classification of asthma
 - Discuss the medical assessment of patients experiencing asthma
 - Discuss both acute and chronic management of asthma

A ventilator tube is visible in the upper left corner, and a stethoscope is in the lower left corner.

Respiratory Anatomy

University of Utah Center for Emergency Programs

Thoracic Cavity

- Lungs
- Heart
- Other Structures

Upper Respiratory Anatomy

- Nose and Mouth
- Pharynx
- Epiglottis

Lower Respiratory Anatomy

- Larynx
- Trachea
- Bronchi
- Alveoli

Muscles of Respiration

- 
- Primary Muscles of Respiration
 - Diaphragm
 - External intercostal
 - Scalene
 - Accessory Muscles of Respiration
 - Sternocleidomastoid
 - Internal intercostal
 - Rectus abdominal

A ventilator circuit is visible in the upper left corner, and a stethoscope is in the lower left corner.

Respiratory Physiology

University of Utah Center for Emergency Programs

Respiration

Respiration is a complex process of oxygen and carbon dioxide exchange.

In humans, it includes:

1. Ventilation from ambient air into alveoli.
2. Pulmonary gas exchange from alveoli to blood.
3. Gas transport through circulation to organs.
4. Peripheral gas exchange from tissue capillaries into cells and mitochondria.

Ventilation

Ventilation from the ambient air into the alveoli of the lung is a two step process.

- 
- Inhalation – an active process
 - Exhalation – a passive process

Inhalation

- The primary muscles of respiration contract.
- The size and shape of the thoracic cavity change (increases).

Exhalation

- The primary muscles of respiration relax.
- The size and shape of the thoracic cavity change again (decreases).

Neuroregulation of Ventilation

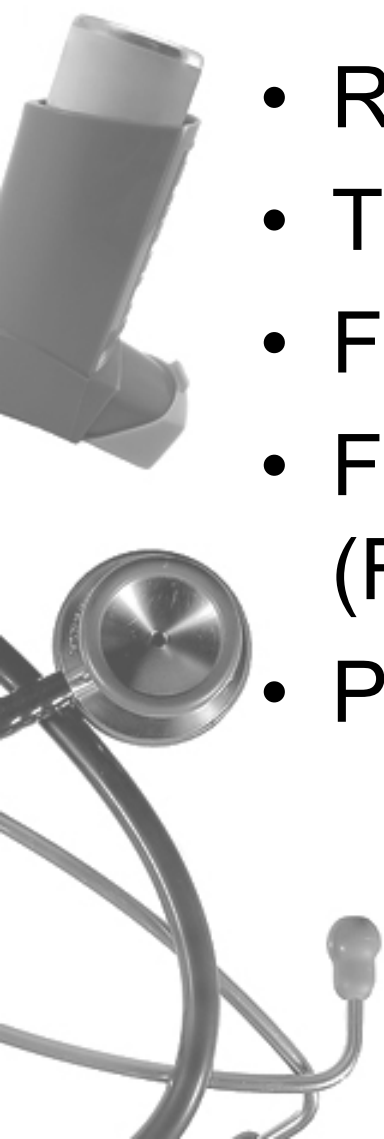

- Central Pattern Generator
 - Dorsal Respiratory Group (DRG)
 - Ventral Respiratory Group (VRG)

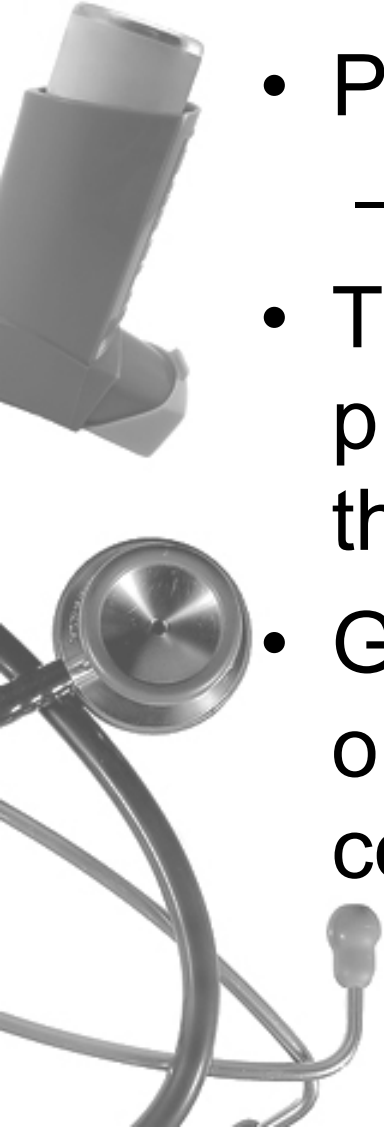

Chemoregulation of Ventilations

- 
- Ventilations are regulated by:
 - pH of the blood (acidic or alkaline)
 - Oxygen levels in the blood
 - Carbon Dioxide levels in the blood

Air Flow Measurements

- 
- Respiratory Rate (RR)
 - Tidal Volume (TV)
 - Forced Vital Capacity (FVC)
 - Forced Expiratory Volume in 1 sec (FEV1)
 - Peak Expiratory Flow (PEF)

Pulmonary Gas Exchange

- 
- Pulmonary Gasses Include:
 - Oxygen, Carbon Dioxide, Nitrogen
 - The alveoli and capillary membranes provide a barrier between the air and the blood
 - Gasses move across this barrier, from one direction to the other, based on concentration gradients

Hemoglobin

- Red Blood Cells contain hemoglobin

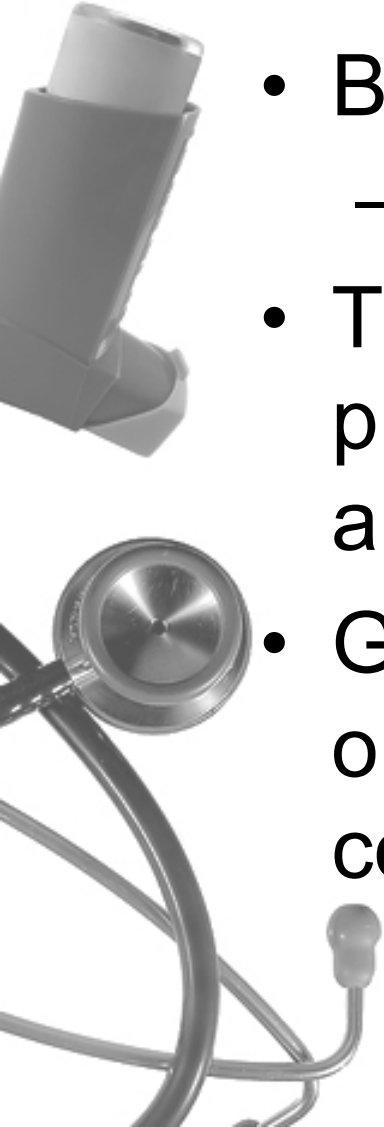

Transport of Gasses

- Arteries and arterioles carry blood away from the heart
- Veins and venuoles carry blood towards the heart

Peripheral Gas Exchange

- 
- A stethoscope is visible in the bottom left corner, and a pulse oximeter is visible in the top left corner.
- Blood Gasses Include:
 - Oxygen and Carbon Dioxide
 - The capillary and cell membranes provide a barrier between the blood and the cell
 - Gasses move across this barrier, from one direction to the other, based on concentration gradients

A ventilator tube is visible in the upper left corner, and a stethoscope is in the lower left corner, both rendered in a light gray, semi-transparent style.

Assessment Tools of Ventilation, Perfusion and Oxygenation

Respirations

- Respiratory Rate
- Respiratory Effort

Skin Color

Pulse Oximetry

- 
- A pulse oximeter is shown in the upper left corner, and a stethoscope is in the lower left corner.
- Measure the diffusion of light through the capillary bed
 - Indicates the amount of hemoglobin that is bound as a percentage

Pulse Oximetry

- At this altitude...
 - 93% and above are considered normal
 - 90-93% may be normal based on history
 - <90% is considered abnormal

Pulmonary Function Tests

- Spirometry
 - TV, FVC and FEV1
 - FEV1 to FVC Ratio

Peak Expiratory Flow Meter

University of Utah Center for Emergency Programs
